Please note: St. Boniface Hospital Research Centre has created a new webcasting platform located at the above link. Participants must register a new username and password to participate. Please see the [webcasting instructions](#) for more information.

## LEARNING OBJECTIVES:

After attending this presentation participants will be able to:

- Discuss the benefits of the Office of the Chief Medical Examiner (OCME) and propose how lessons learned from Manitoba's provincial death data should transform local prescribing and dispensing practices.
- Illustrate the importance of the College's involvement with the Adult Inquest Review Committee (AIRC) and reflect on the potential impact on policies and regulations.
- Investigate the role that polypharmacy plays in morbidity and mortality associated with poor prescribing/dispensing practices.
- Recognize that certain combinations of prescription medications significantly increases overdose risk.
- Propose an approach to managing concurrent over-the-counter medication use in patients who are at risk of multi-drug toxicity.
- Analyze case studies and apply learnings to daily practice.
- Identify and examine the several resources available for best practices.
