### Section 5: Final Check Policy and Procedure Document

The pharmacy must develop a comprehensive document for pharmacy staff outlining the final check policy and procedures specific to their site. The Final Check application process requires pharmacy managers and staff to assess current dispensing processes to determine the changes required for a pharmacy technician to perform the final check safely. The objective of the final check policy and procedure document is to provide new and current pharmacy staff with a detailed understanding of the pharmacy's final check process.

Pharmacy managers and staff should consider all aspects of the final check procedure and should include the following in the policy and procedure document:

#### **Checking Process**

- Lists of checks to be performed by technician (e.g., right patient, right drug, right quantity, etc.).
   Specify the procedure for different types of products or drugs (traditional prescriptions, compliance packages, compounds, etc.)
- Types of prescriptions (new, refill, logged) that can be checked
- Types of drug preparations involved or excluded (e.g. narcotics, cytotoxic/high alert medications, compounds, sterile products, etc.)
- Pharmacy workflow for applicable dispensary practices (traditional prescriptions, compliance
  packages, compounds, etc.) Must also include discussion of the responsibility of the pharmacist
  to perform clinical assessment of all prescriptions and complete counselling and also that a
  pharmacy technician cannot check a prescription they have prepared/filled.

#### **Pharmacy Technician Qualification, Training and Evaluation**

Qualifications of a pharmacy technician to perform final checks and differences for new hires

and existing pharmacy technicians

- Training process and educational requirements:
  - o for new hires and current staff
  - o after an absence (specify minimum length of absence)
  - o after suspension of checking duties or mandatory retraining
- Additional training requirements for different dispensary practices and products (e.g. sterile compounding, Scriptpro packaging, etc.)
- A description of retraining procedures if different when compared to initial training procedures, and how often/when retraining is required
- Evaluation of pharmacy technician checking competency. Specify what is assessed, how often, by whom and the accuracy rate or unacceptable rate of error that would suspend a pharmacy technician's checking duties.
  - o for new hires and current staff
  - o after initial training
  - o after an absence (specify minimum length of absence)
  - o after suspension of checking duties or mandatory retraining

#### **Quality Assurance**

Please note that in order to continue to be qualified, a pharmacy technician must have worked as a pharmacy technician for at least 600 hours in the preceding three-year period (starting three years after first qualifying), and have participated in the performance review conducted by the pharmacy manager or delegate at the practice site at a minimum of every two years. This includes documentation of hours worked as a pharmacy technician; an assessment of a technician's job performance in terms of quality of patient care, administrative skills and the ability to work consistently within the rules governing the pharmacy and pharmacy practice; and, documentation of attaining the Council approved professional development requirement.

- Performance review process frequency, review of performance, documentation of hours worked and attainment of professional development requirements
- Assessment of checking competency by re-evaluation of checking competency and audits conducted. Provide specifics for re-evaluation process and audits (frequency of re-evaluation, how many checks are audited, how often, etc.)
- Unacceptable accuracy rate
- Procedure or process when performance issues related to inaccuracy during checking tasks are identified

#### **Medication Discrepancies and Incidents**

- Pharmacy procedure upon discovery of medication discrepancy or incident
- Procedure for continuous monitoring and addressing medication discrepancies and incidents

#### Recordkeeping

- Records (written and/or electronic) used to document pharmacy technician checks
- Storage of the records (how and where)
