### **Personal Learning Action Plan Template**

This template can be used to help develop, plan, document your learning goals and monitor your progress.

Learning Goals: What areas do I want to gain more experience in?	Action Plan: What exercises or activities will help me?	Resources: What resources will I use?	Learning Outcome: Am I confident in my ability? Do I need more experience or practice?

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7 Phone (204) 233-1411 | Fax: (204) 237-3468

E-mail: registration@cphm.ca | Website: www.cphm.ca

### **Professional Development (PD) Logs**

The Pharmacy Technician PD requirement is a minimum of 15 hours of learning activities each PD year of which a minimum of 5 hours must be from accredited learning activities. One continuing education unit (CEU) is equivalent to one contact hour of accredited learning activities.

Please visit Professional Development for Pharmacy Technicians page for more information. You will be required to meet the annual PD requirement once you become listed.

The College of Pharmacists of Manitoba (CPhM) strongly encourages all pharmacy technicians to keep your learning activities updated and do not forget to enter them via "My Learning" on your Registrant Portal. Kindly refer to the document located under My Groups > Active Registrants > Registrant Portal Guides.

Please make sure to enter your learning activities for the current PD reporting cycle. Here are some helpful tips:

- Record Your Activities: List each of your learning activities accurately, answer the reflection questions, and upload your statements of completion or participation. It is strongly recommended that you upload your statements so that you do not need to provide them if chosen for the Annual PD Review.
- Use the "SUBMIT" Button: After entering 2-3 activities, click the "SUBMIT" button to save your progress. This helps prevent data loss if the system times out while you're away.
- Complete the Mandatory Learning Activity: Every Manitoba pharmacy professional must complete the annual professional development mandatory module or webinar to renew their license. We strongly recommend completing it before the renewal period and uploading your certificate to your profile.
- New Pharmacy Professionals: If you're new to the field, you must view this year's module and all previous mandatory PD learning activities.
- Keep Your Records: Maintain copies of your PD statements of completion and supporting documents for three years and be prepared to provide them if selected for the Annual PD Review.

Avoid leaving your PD obligations until the end of the PD reporting cycle.

Pharmacy professionals will not be able to complete their renewal until they have met and entered the minimum PD requirements in the online PD Log. Once you complete your renewal online, the system will close the current practice year, and you will not be able to add new learning activities or upload your completion documents after that. More details to be added at a later date.

If you have any questions or concerns, please contact profdevelopment@cphm.ca.

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7 Phone (204) 233-1411 | Fax: (204) 237-3468

E-mail: registration@cphm.ca | Website: www.cphm.ca

### **Rating Scale**

For the Pre-Rotation Self-Assessment and all Learning Activities, learners and supervisors must rate the achievement of the competency element/activity based the following rating scale:

	RATING SCALE		
1	Unsatisfactory	Learner's knowledge to perform the task is below expectations. Learner requires assistance and extensive intervention and support to complete the task. Demonstrates objective < 60% of the time.	
2	Needs Improvement	Learner has the knowledge and understands process but does not always apply them consistently and independently without supervision. Frequently requires support. Demonstrates objective 60% to < 75% of the time.	
3	Satisfactory	Learner can perform task independently and with confidence. Requires only occasional support. Demonstrates objective > 75% of the time.	
4	Exemplary	Learner can perform in an independent fashion. Rarely needs support. No improvement needed. Always above expectations. Demonstrates objective > 90% of the time.	
N/O	No opportunity	No opportunity to experience the competency element in previous work experience. No opportunity is only valid for the learner's Pre-Assessment and for the first part(s) of the evaluation. The learner must successfully complete all competencies and learning activities by the final part in order to successfully complete the Pharmacy Technician SPT Program.	

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7
Phone (204) 233-1411 | Fax: (204) 237-3468
E-mail: registration@cphm.ca | Website: www.cphm.ca

#### **Learner Pre-Rotation Self-Assessment**

#### Introduction

#### Please note:

This self-assessment must be completed prior to beginning the SPT learning activities but does NOT need to be submitted to the College of Pharmacists of Manitoba (CPhM).

Self-assessment is key to understanding one's practice strengths and limitations. It requires the learner to critically evaluate his/her knowledge and skills in order to determine where more practice and experience is required to achieve competency. This baseline information is used as a guide for both the pharmacy technician-in-training and SPT supervisor to develop learning goals for the duration of the SPT program. The self-assessment also provides the learner and SPT supervisor with an understanding of each key competency and its corresponding competency elements. In order to maintain competence, self-assessment should occur throughout your career as you continue to learn and improve your skills.

Using the rating scale described above as your guide, complete the following self-assessment by circling the number that best reflects your ability to meet the competency indicated. Add comments, exercises or ideas after each section that may assist you in improving your current practice. Use these comments to develop learning goals for the duration of your SPT. A Personal Learning Action Plan template is included in this Logbook to help track your goals and monitor your progress.

#### **Competency 1: Ethical, Legal and Professional Responsibilities**

Pharmacy technicians practise within legal requirements, demonstrate professionalism and uphold professional standards of practice, codes of ethics and policies.

#### **Key Competencies**

- i. Practise within legal requirements.
- ii. Uphold ethical principles.
- iii. Manage actual and potential illegal, unethical, or unprofessional actions or situations.
- iv. Apply principles of professionalism.
- v. Document activities of practice in compliance with federal and provincial/territorial legislation, standards, and policies.

Key Competency	Please rate your performance in the following areas:	Intern's Rating
1.1 Practice	Applies legal requirements to practice, including federal and provincial legislation, policies, by-law, and standards.	1 2 3 4 N/O
within legal requirements.	Applies legal requirements to practice, including federal and provincial legislation to the collection, use, storage, disclosure, and destruction of personal health information.	1 2 3 4 N/O
1.2 Uphold ethical	Applies principles of professional codes of ethics.	1 2 3 4 N/O
principles.	Apply ethical principles in the decision-making process.	1 2 3 4 N/O
1.3 Manage actual and potential illegal, unethical, or unprofessional actions or situations in the workplace.	Identify and undertake appropriate intervention to address illegal, unethical, or unprofessional actions or situations.	1 2 3 4 N/O
1.4 Apply principles of professionalism.	Accept responsibility and accountability for own actions and decisions.	1 2 3 4 N/O
	Seeks guidance when uncertain about own knowledge, skills, abilities, and scope of practice.	1 2 3 4 N/O

#### **Competency 2: Patient Care**

Pharmacy technicians participate in meeting the patient's health and drug-related needs, through collaboration with the patient, the pharmacist and other health professionals, to achieve the patient's health goals.

#### **Key Competencies**

- i. Develop a professional relationship with the patient.
- ii. Obtain patient information for pharmacist review.
- iii. Collaborate with the pharmacist to support care plan activities.

Key Competency	Please rate your performance in the following areas:	Intern's Rating
2.1 Develop a professional relationship with the patient.	Establishes and maintains trusting professional relationships with patients by using effective communication skills.	1 2 3 4 N/O
	Demonstrates a caring, empathetic, and professional attitude.	1 2 3 4 N/O
	Determines and acknowledges the patient's needs, values, and desired level of care.	1 2 3 4 N/O
	Gather information from the patient using appropriate interview techniques, including active listening.	1 2 3 4 N/O
	Gather information from the patient's health records.	1 2 3 4 N/O
2.2 Obtain information about the patient.	Organize, reconcile, and record the patient's information.	1 2 3 4 N/O
	Identify factors such as culture, language, demographic and physical characteristics that may impact patient care.	1 2 3 4 N/O
	Gather information required for medication reconciliation.	1 2 3 4 N/O
	Measure a patient's physical parameters (e.g. height, weight, and blood pressure).	1 2 3 4 N/O

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7 Phone (204) 233-1411 | Fax: (204) 237-3468

#### **Competency 3: Product Distribution**

Pharmacy technicians implement safe and effective product distribution to ensure the safety and accuracy of released products.

#### **Key Competencies**

- i. Receive, interpret, and process a prescription.
- ii. Prepare products for dispensing.
- iii. Prepare and compound non-sterile and sterile products according to recognized guidelines and standards of practice.
- iv. Verify the technical aspects of the prescription to ensure accuracy and quality of products.
- v. Collaborate with the pharmacist in the release of the product.

Key Competency	Please rate your performance in the following areas:	Intern's Rating
	Determine the validity, clarity, completeness, and authenticity of the prescription and resolve concerns in collaboration with the pharmacist.	1 2 3 4 N/O
3.1 Receive, interpret and process a prescription.	Pharmacy technicians in Manitoba can ask a practitioner and receive his/her instructions as to whether an existing prescription can be refilled as previously prescribed and without any change to the prescription. Please note that due to federal legislation, a pharmacy technician cannot accept a verbal order from a practitioner for any of the drugs covered under the Controlled Drugs and Substances act (including benzodiazepines and narcotics)	1 2 3 4 N/O
	Transfer a prescription and receive a transferred prescription. N.B. Pharmacy technicians in Manitoba are <u>not</u> authorized to receive or transfer prescriptions from another pharmacy; this must be completed by a pharmacist in Manitoba. Your supervisor must still assess this competency with you in an objective, structured practical type assessment, using direct supervision by the pharmacist. i.e. Pharmacy technicians cannot perform this competency in Manitoba.	1 2 3 4 N/O

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7 Phone (204) 233-1411 | Fax: (204) 237-3468

Key Competency	Please rate your performance in the following areas:	Intern's Rating
	Interpret numerals, symbols, measurement systems and Latin abbreviations.	1 2 3 4 N/O
	Perform pharmaceutical calculations.	1 2 3 4 N/O
	Identify patterns of unusual drug prescribing and usage including possible diversion or drug misuse and report relevant findings to the pharmacist or appropriate authority.	1 2 3 4 N/O
3.2 Prepare products for dispensing	Process the adjudication for payment of prescriptions and other pharmacy services using knowledge of third-party payer policies and formularies.	1 2 3 4 N/O
	Select appropriate products by applying knowledge of brand and generic names, dosages, and dosage forms.	1 2 3 4 N/O
	Apply drug interchangeability principles in accordance with applicable formularies, policies, or legislation.	1 2 3 4 N/O
	Verify the integrity of a product by considering stability, and, where applicable, sterility, including checking expiry dates, physical appearance, and odour.	1 2 3 4 N/O
	Measure products by counting, pouring, or weighing using the appropriate equipment and technology.	1 2 3 4 N/O
	Package products in a suitable container to maintain product integrity, stability, and where applicable, sterility.	1 2 3 4 N/O
	Use packaging that is safe and appropriate for the patient, including pre-packaging, multi-dose or unit dose packaging and child-resistant vials.	1 2 3 4 N/O
	Label products according to legislative requirements, best safety practices, established protocols, and patient specific needs.	1 2 3 4 N/O

#### **Competency 9: Quality and Safety**

Pharmacy technicians collaborate in developing, implementing, and evaluating policies, procedures and activities that promote quality and safety.

#### **Key Competencies**

- i. Contribute to a culture of patient safety.
- ii. Contribute to continuous quality improvement and risk management activities related to the drug distribution system.
- iii. Ensure the quality, safety, and integrity of products.
- iv. Create and maintain a working environment that promotes safety.

### **Pharmacy Technician-In-Training Learning Activities**

#### Introduction

After completion and review of the Pre-Rotation Self-Assessment, the learner and supervisor may begin the learning activities. After each time the activity is completed, the learner and the supervisor are to rate the pharmacy technician-in-training's performance of the respective competencies.

All learning activities are to be completed and documented in this Logbook. Supplemental documentation should be attached as needed. The learning activities may all be successfully completed within the first 120 hours. If so, the activities should be repeated in the second or third (if applicable) blocks to give the learner an opportunity to improve and build upon the knowledge gained in the first part of the SPT program. If the learner did not have an opportunity to perform all competencies and activities during the first block(s) of the SPT program, and/or did not obtain a "satisfactory" or "exemplary" rating, the remaining block(s) of time must be used to demonstrate each required competency with confidence and a limited amount of support.

Please see the Manual and Submission Forms documents for more information on the learning activities and submission of Evaluation Forms.

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7 Phone (204) 233-1411 | Fax: (204) 237-3468 E-mail: registration@cphm.ca | Website: www.cphm.ca

#### Competency 1: Ethical, Legal and Professional Responsibilities

Pharmacy technicians practise within legal requirements, demonstrate professionalism and uphold professional standards of practice, codes of ethics and policies.

#### **Key Competencies**

- i. Practise within legal requirements.
- Uphold ethical principles.
- iii. Manage actual and potential illegal, unethical, or unprofessional actions or situations.
- iv. Apply principles of professionalism.
- Document activities of practice in compliance with federal and ٧. provincial/territorial legislation, standards, and policies.

#### 1.1 Practise Within Legal Requirements

- 1.1.1 Apply legal requirements to practice, including federal and provincial/territorial legislation, policies, by-laws, and standards.
- **1.1.3** Apply federal and provincial/territorial privacy legislation to the collection, use, storage, disclosure, and

destruction of personal health information.

Throughout the various stages of the dispensing process that you are involved with at your practice site, identify the corresponding legislation (i.e. specific sections that are relevant to each of these stages). Stages include:

- Receipt of prescription
- Assessment of appropriateness of therapy
- Activity Order entry
  - Medication preparation pursuant to a prescription
  - Check on technical accuracy of completed prescription,
  - Release of product to patient or patient's agent, and

Date completed		Supervisor's Initials					
Comments:							

#### 1.4 Apply Principles of Professionalism

**1.4.4** Apply principles of continuing professional development including assessing own learning needs and

developing a plan to meet these needs.

#### **Activity**

Review and fill out the Personal Learning Action Plan Template found in this Logbook. Identify areas of your practice that you feel could benefit from more experience or training. What can you do to gain more familiarity in these areas? Find resources to help fill these gaps in knowledge.

Review the Pharmacy Technician Listing pages of the College of Pharmacists of Manitoba website. What are the professional development requirements once you become listed as a pharmacy technician? What is accredited learning? How do you document your learning? Who reviews your professional development and how often?

Complete all available annual, mandatory online PD modules and learning activities which can be accessed in your online technician portal.

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7 Phone (204) 233-1411 | Fax: (204) 237-3468

#### 1.4 Apply Principles of Professionalism

- **1.4.5** Maintain appropriate professional boundaries.
- **1.4.6** Protect the privacy and confidentiality of the patient.

#### **Activity**

Why is it important to maintain appropriate professional boundaries?

Describe TWO situations you encountered that demonstrate the importance of the pharmacy technician's role in the adherence to patient confidentiality regulations. Identify corresponding parts in the regulations, Code of Ethics, and privacy legislation (PHIA) relevant to these situations.

Examples of situations include: Routine disposal of patient labels and profiles and accessing patient records.

Discuss with your supervisor how you would explain PHIA to a patient. What language would you use to ensure the patient understands?

What processes in place at your practice site ensure patient confidentiality?

Discuss TWO situations where a patient's personal health information can be disclosed without their permission.

What action does the pharmacy need to take in the event of a privacy breach?

Manitoba Health has developed a free <a href="PHIA Online Training Program">PHIA Online Training Program</a> to assist trustees in complying with the many requirements of this law. This program of ten modules provides a comprehensive review of The Personal Health Information Act (PHIA) for healthcare professionals. Completion of the PHIA Online Training Program is not a requirement but is strongly recommended.

#### **Competency 2: Patient Care**

Pharmacy technicians participate in meeting the patient's health and drug-related needs, through collaboration with the patient, pharmacist, and other health professionals, to achieve the patient's health goals.

#### **Key Competencies**

- i. Develop a professional relationship with the patient.
- ii. Obtain patient information for pharmacist review.
- iii. Collaborate with the pharmacist to support care plan activities.

#### 2.1 Develop a professional relationship with the patient

- **2.1.1** Establish and maintain rapport by using effective communication skills.
- **2.1.2** Demonstrate a caring, empathetic, and professional attitude.
- **2.1.3** Determine and acknowledge the patient's needs, values, and desired level of care.

#### **Activity**

Reflect on a situation where you built rapport with a patient and gained their trust. What skills did you demonstrate to form this connection with the patient? Would you expect the same outcome given a different patient and/or different situation? Was there any aspect of the encounter you feel could be improved?

Reflect on a situation where the interaction was not ideal between you and a patient. What issues needed to be addressed under this circumstance and how would you have handled it differently?

What is empathy? Discuss with your supervisor a situation where you showed empathy to a patient. How did they respond? How did you determine the patient's needs and desired outcome(s)? How did you maintain professionalism while showing care and empathy for the patient?

Discuss with your supervisor the patients with which he/she has formed long lasting and continuous professional relationships. How did your supervisor build this long-lasting relationship with the patient?

E-mail: registration@cphm.ca | Website: www.cphm.ca

#### 2.2 Obtain patient information for pharmacist review

- **2.2.1** Gather information from the patient using appropriate interview techniques, including active listening.
- **2.2.3** Gather information from the patient's health records.
- **2.2.6** Organize, reconcile, and record the patient's information.

#### **Activity** Community Pharmacy Site

Practice interviewing patients to create and update patient records under staff supervision. What questions should you be asking the patient during this process?

Identify challenges that you have encountered when interviewing the patient and how they were resolved.

#### **Hospital Pharmacy Site**

Observe how incoming orders are reviewed and what to watch for (e.g. weight for pediatric patients). How do hospital pharmacy staff contribute to the updating or maintenance of patient records? Identify challenges that you have encountered and how they were resolved.

Review contents of three patient's health record with the pharmacist (e.g. patient chart).

Discuss how nurses track medication administration and storage in hospital and personal care homes.

#### **Hospital and Community**

How and when should information in the patient's chart or record be verified using DPIN?

### 2.2 Obtain patient information for pharmacist review

**2.2.5** Measure the patient's physical parameters such as height, weight, and blood pressure.

### Activity

Practice taking at least THREE patient's blood pressure and record the value in the patient's chart.

Discuss with your supervisor why it is important that patients be aware of their current blood pressure reading.

Recall any real or potential difficulties that you encountered while obtaining a patient's physical parameters. How were these obstacles handled?

If this task cannot be completed on a patient, then the activity may be completed on pharmacy coworkers.

### 2.3 Collaborate with the pharmacist to support care plan activities

**2.3.2** Assist the patient in making informed decisions regarding the selection and use of drug administration devices, monitoring devices and health aids.

### **Activity**

Demonstrate the use of at least THREE devices (to be determined by your supervisor) to patients or staff. What special advice or precautions specific to each device should be mentioned during these demonstrations? What types of patient questions would need to be referred to the pharmacist regarding medical devices?

Examples of devices include: metered-dose inhaler spacer, home blood pressure monitor, glucose meter, home health care device, eye dropper, etc.

Recall any real or potential difficulties that you encountered while demonstrating the use of a medical device. How were these obstacles overcome?

Log a list of devices demonstrated.

### **Competency 3: Product Distribution**

Pharmacy technicians implement safe and effective product distribution to ensure the safety and accuracy of released products.

### **Key Competencies**

- i. Receive, interpret, and process a prescription.
- ii. Prepare products for dispensing.
- iii. Prepare and compound non-sterile and sterile products according to recognized guidelines and standards of practice.
- iv. Verify the technical aspects of the prescription to ensure accuracy and quality of products.
- v. Collaborate with the pharmacist in the release of the product.

### 3.1 Receive, interpret and process a prescription

**3.1.1** Determine the validity, clarity, completeness, and authenticity of the prescription and resolve concerns in collaboration with the pharmacist.

### Activity

Describe at least TWO situations when prescriptions did not meet legislative requirements or needed further clarification. What were the issues and how were they resolved? How can you verify the authenticity of a prescription?

Where can you find information on prescription requirements for the following: M3P, narcotic drugs, controlled drugs, targeted substances, and prescriptions received by fax, prescriptions written outside Manitoba, and methadone?

What additional information is required on the prescription for clinical assistants, extended practice pharmacists and nurse practitioners? Why is this important to patient care?

### Resources

Please see the Legislation and Supporting Documents page (under Pharmacy Practice) on the College website to review all applicable documents including but not limited to:

### 3.1 Receive, interpret and process a prescription

**3.1.2** Transcribe verbal orders and ensure their accuracy.

### Activity

Pharmacy technicians in Manitoba can ask a practitioner and receive his/her instructions as to whether an existing prescription can be refilled as previously prescribed and without any change to the prescription. Please note that due to federal legislation, a pharmacy technician cannot accept a verbal order from a practitioner for any of the drugs covered under the *Controlled Drugs and Substances Act* (including benzodiazepines and narcotics). Ask a prescriber for a refill on TWO existing prescriptions where no changes are expected.

What, if any, issues were encountered during the process, and how should they be addressed?

### 3.1 Receive, interpret and process a prescription

**3.1.3** Transfer a prescription and receive a transferred prescription.

### **Activity**

N.B. Pharmacy technicians in Manitoba are *not* authorized to receive or transfer prescriptions from another pharmacy; this must be completed by a pharmacist in Manitoba. Your supervisor must still assess this competency with you in an objective, structured practical type assessment, using direct supervision by the pharmacist. I.e. Pharmacy technicians cannot perform this competency in Manitoba.

**In a training setting**, practice transferring and receiving TWO verbal or fax prescription to and from another 'pharmacy'. Identify any obstacles you experienced during this process. Discuss with your supervisor how these obstacles were overcome and (if possible) what can be done to prevent them in the future.

### 3.1 Receive, interpret, and process a prescription

### **3.1.5** Perform pharmaceutical calculations.

### Activity

Carry out pharmaceutical calculations as part of the drug distribution process at your practice site. What types of calculations are performed? What is the best practice for an independent check on calculations?

What calculations are required when dispensing methadone and how are they performed? What calculations are done for compounding and how are they performed?

What calculations are done for pediatric dosing and how are they done?

Perform, document and review at least THREE different types of calculations with your supervisor.

### 3.1 Receive, interpret, and process a prescription

**3.1.6** Identify patterns of unusual drug prescribing and usage including possible diversion or drug misuse and report relevant findings to the pharmacist or appropriate authority.

### **Activity**

Identify drugs (THREE excluding narcotics, controlled drugs, benzodiazepines, or targeted substances, and THREE including) that may have potential for dependence or misuse.

For each of the above drugs, consider why they may be targets for misuse.

Discuss with your supervisor red flags that may indicate drug diversion. Identify behaviours that suggest drug abuse or misuse.

Identify various types of diversion (e.g. prescription forgery, drug seeking behaviour).

Discuss with your supervisor how situations that actually (or potentially) occurred during his/her practice were detected and handled, such as prescription forgery in community practice or ward stock diversion in hospital practice.

How should the pharmacy technician detect and manage the referral of these issues to the pharmacist?

Review the Forgeries page on the College website

### 3.1 Receive, interpret, and process a prescription

**3.1.7** Process the adjudication for payment of prescriptions and other pharmacy services using knowledge of third- party payer policies and formularies.

### **Activity**

**Community Pharmacy Site:** Enter at least THREE different third-party plans in the system, under the supervision of a pharmacy staff member. What challenges did you encounter and how did you resolve them? Where can you find information on plans that are publicly funded by the Manitoba government? How are prescriptions that require special authorization handled? How is the situation handled when there is some type of limitation on the coverage of the medication by the patient's third-party plan?

**Hospital Pharmacy Site:** How does the hospital formulary increase or decrease the pharmacoeconomics of the institution? What challenges may occur and how do you resolve them? How can a non-formulary drug be used in the hospital? What are the limitations and distribution challenges of using a patient's own medications?

Date:	Applicant's Rating 1	2	3	4 N/O	Supervisor's Rating 1 2 3 4 N/O

### 3.2 Prepare products for dispensing

- **3.2.1** Select appropriate products by applying knowledge of brand and generic names, dosages, and dosage forms.
- **3.2.2** Apply drug interchangeability principles in accordance with applicable formularies, policies, or legislation.

### **Activity**

How do you select the most appropriate product or brand when filling a prescription?

Ask your supervisor to identify at least FIVE different drugs. Document pertinent information, including:

- Classification under NAPRA's National Drug Schedules
- Interchangeability status in Manitoba (for community pharmacy)
- Automatic therapeutic substitution (for hospital pharmacy)
- Therapeutic class
- Indications for use
- Dosage and administration
- Appropriate auxiliary labels
- The references used

When would the lowest cost alternative for a drug not be dispensed to a patient?

### Resources

### 3.2 Prepare products for dispensing

- **3.2.3** Verify the integrity of a product by considering stability, and where applicable, sterility, including checking expiry dates, physical appearance, and odour.
- **3.2.4** Measure products by counting, pouring, or weighing using the appropriate equipment and technology.

### **Activity**

Discuss with your supervisor a situation where you identified a drug product that was no longer suitable for use (e.g. past expiry date, abnormal appearance, or odour). What procedure(s) does your practice site follow to ensure product integrity? What is the protocol for destroying/returning unusable or expired products?

List the various measuring or counting devices (e.g. scale, pill counter) at your practice site with your supervisor and discuss the limitations in their use. What may affect their accuracy and precision?

How does the pharmacy identify hazardous drugs and what special procedures are used in dispensing these products?

Date:	Applicant's Rating 1	2	3	4 N/O	Supervisor's Rating	1	2	3	4	N/O
Date:	Applicant's Rating 1	2	3	4	Supervisor's Rating	1	2	3	4	
Date completed					Supervisor's Initia	ls

E-mail: registration@cphm.ca | Website: www.cphm.ca

### 3.2 Prepare products for dispensing

- **3.2.5** Package products in a suitable container to maintain product integrity, stability, and, where applicable, sterility.
- **3.2.6** Use packaging that is safe and appropriate for the patient, including pre-packaging, multi-dose or unit dose packaging and child-resistant vials.
- **3.2.7** Label products according to legislative requirements, best safety practices, established protocols, and patient-

specific needs.

### Activity

### **Storing Products:**

Describe THREE drugs that require specific storage conditions. Why do these drugs require specific storage? Discuss with your supervisor the importance of proper storage.

### **Packaging Products:**

Participate in the full variety of packaging of products that occurs at your practice site. Examples of types of packaging for distribution include: Pre-packaging, multidose or unit dose, blister packs, IV admixture and child-resistant vials. Discuss with your supervisor the purpose of packaging medications in each of the above package forms. Describe at least THREE items that you have repackaged and why this was necessary. What are the labelling requirements for repackaged products?

What are examples of drugs that have risks in handling them (e.g. chemotherapy drugs)? What special precautions need to be taken when handling, packaging, and labelling them?

### **Labelling Products:**

Discuss with your supervisor potential implications of missing or improper use of auxiliary labels, using specific drugs or drug classes as examples. Where can you find a list of the requirements for product labels? Identify TWO drugs or drug classes that require the auxiliary label "Keep Out of Reach of Children".

What legally must appear on the label of a drug before it is dispensed? What must appear on the label for pass medication from a hospital?

### 3.3 Prepare and compound non-sterile and sterile products

**3.3.2/3.3.3** Prepare and compound sterile and non-sterile products according to recognized guidelines and standards of practice.

### Activity

Prepare non-sterile compounds and observe the preparation of a sterile compounded product (if applicable) at your practice site.

What standards are used for sterile and non-sterile compounding? What are the legal labeling requirements for the compounded products that you have made? How are expiry dates determined for compounded products? What references are typically used during the compounding process?

What system is in place to standardize documentation for quality assurance of these compounded products? Under what circumstances should a pharmacy compound a product?

What is the difference between compounding and manufacturing?

List the five most common compounds that are prepared at your practice site.

### 3.4 Verify the technical aspects of the prescription to ensure accuracy and quality of products

- 3.4.1 Identify when an independent double check should be performed.
- **3.4.2** Check the product and its prescription label against the prescription using a systematic approach.

### **Activity**

The pharmacy technician-in-training must demonstrate competency in his or her ability to accurately perform an independent check on the technical accuracy of completed prescriptions/orders prepared for release to patients, under normal working conditions. The pharmacy technician-in-training must accurately perform 200 technical checks in a row without making a mistake in order to meet this competency. The candidate must record ALL checked prescriptions (including those where an error is made) on the Program Prescription Daily Tracking Log (Appendix A). Please see "Demonstration of Product Release Proficiency" in the SPT Manual for more information.

- A maximum of 50 prescription checks will be included in any one day.
- A new tracking log must be used each day to record prescriptions checked and any errors identified.
- No errors in checking are permitted during the technical checking process.
   If a mistake occurs, the evaluator/supervisor must inform the pharmacy technician in training and discuss the error made. The checking process must then be restarted back at zero, regardless of how far along the learner had come in reaching the targeted 200 consecutive checks.
- All prescriptions checked by the pharmacy technician-in-training must be second checked by the supervisor or pharmacist for technical accuracy.

  Even if a regulated pharmacy technician is the pharmacy technician-in-training's supervisor for the SPT, the regulated pharmacy technician can only verify the work of the learner without a pharmacist checker if the process used in that pharmacy has been approved by Council. Otherwise, even if a regulated pharmacy technician acts as the evaluator for this exercise, a pharmacist must still do the final check and act as the evaluator.
- No product can be released to the patient until the pharmacist has assessed the appropriateness of therapy and has counselled the patient.

\*The Demonstration of Product Release Proficiency (DPRP) only needs to be completed once in its entirety and does not need to be repeated if the DPRP was successfully completed during the first 120-hour block, but it is recommended that the learner perform as much practice as possible beyond the required 200 checks.

### 3.4 Verify the technical aspects of the prescription to ensure accuracy and quality of products

\*Pharmacy technicians can only, before a drug is dispensed, perform a final check when the process of preparing the drug for dispensing was performed by another technician, student, intern or a person referred to in section 64 of the Regulations to the *Pharmaceutical Act* <u>AND</u> only if the pharmacy manager has received approval from the Council of the College of Pharmacists of Manitoba for the drug packaging preparation processes used in the pharmacy.

### 3.5 Collaborate with the pharmacist in the release of the product

**3.5.1** Determine whether the legal and professional requirements for a product to be released to the patient have been met.

3.5.2 Identify when the patient requires further consultation or education from the pharmacist.

### **Activity**

Discuss the following with your supervisor:

What does the legislation state with respect to the responsibility of the pharmacist to:

- Ensure appropriateness of therapy?
- Counsel the patient?
- Monitor ongoing appropriateness of therapy?

What processes are in place at the practice site to confirm that the pharmacist has reviewed the prescription and patient record to determine appropriateness of therapy and that the requirements for counselling have been met?

What processes are in place to ensure that prescriptions are released to the correct patient or agent?

When would a patient require further consultation from the pharmacist? Why?

### **Resources**

### **Competence 4: Practice Setting**

Pharmacy technicians contribute to the management of the practice setting with the goal of ensuring safe, effective, and efficient product distribution.

### **Key Competencies**

- i. Optimize the safety, efficacy, and efficiency of operations in the practice setting.
- ii. Contribute to the management of pharmacy inventory to ensure safe, effective, and efficient product distribution.
- iii. Contribute to the management of record keeping activities within the practice setting.

### 4.1 Optimize the safety, efficacy and efficiency of operations in the practice setting

- **4.1.1** Demonstrate the organization and time management skills necessary to effectively prioritize, organize and manage product distribution workflow.
- **4.1.3** Use and maintain automation and other technology to enhance safety, efficacy, and efficiency in the practice setting.

### **Activity**

Describe some of the tasks or projects the pharmacy technicians perform at your practice site, for example:

- Managing workflow
- Supervising personnel
- Maintenance of equipment (operations) and using systems
- Preparing reports/documents
- Organizing and filing
- Maintaining relevant documents
- Staff scheduling
- Meeting with pharmaceutical representatives.

What knowledge and skills are necessary to be effective in these roles? What knowledge and skills do you already have that would make you effective in these roles? What knowledge and skills would you need to develop?

Discuss with your supervisor how incoming prescriptions or orders are prioritized. What are the various considerations?

How is automation and other technology at your practice site maintained?

# 4.2 Contribute to the management of pharmacy inventory to ensure safe, effective, and efficient product distribution

- **4.2.1** Apply inventory and formulary management systems and strategies that incorporate best practices, including new technologies
- **4.2.2** Prepare and place orders for stock and supplies using appropriate technology from licensed sources
- 4.2.3 Identify issues with the drug supply chain
- 4.2.4 Return or properly dispose of recalled, expired and unusable products

### Activity

How is the inventory (ins and outs) tracked at your practice site? How are changes to the formulary incorporated into this system? How are orders placed for stock and supplies? From where?

Identify various situations pertaining to ordering issues from the wholesaler and other suppliers at your practice site (e.g. pharmacy shortage, recalls, manufacturer back-order, raw ingredient shortage, etc.). How do you communicate with and inform patients and other health care professionals regarding these short-supply issues? How were these issues addressed? What options were offered to patients? Prepare a procedure that can be used by other pharmacy staff regarding ordering issues for different types of suppliers or different types of products. Discuss your algorithm with your supervisor and make changes accordingly.

Identify specific drug distribution processes at your practice site that you are less familiar with (e.g. compounding, inventory control, computerized order entry, automated dispensing machine, etc.). Schedule more training time for these areas (on-site or off-site) during your SPT rotation, in consultation with your supervisor.

Review how automation is utilized at your practice site, for example the use of Baker cells, Pyxis, etc.

When would an inter-pharmacy transfer of stock be appropriate? On what conditions? How would this need to be documented? When is it not appropriate?

Identify risks within the drug preparation and distribution system that could cause a medication error. How can these risks be minimized?

Participate in the procurement of narcotics (in community) or special access drugs (in hospital), including the documentation required. Record at least ONE issue that you encountered and how this was addressed. Where can you find information on the relevant legislation (i.e. specific sections) to assist you in regard to the procurement, storage, disposal and record keeping of these drugs?

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7 Phone (204) 233-1411 | Fax: (204) 237-3468

E-mail: registration@cphm.ca | Website: www.cphm.ca

# 4.2 Contribute to the management of pharmacy inventory to ensure safe, effective, and efficient product distribution

What is Health Canada's Special Access Programme (SAP)?

How does the pharmacy monitor for outdated stock? What is the procedure for dealing with expired drugs found in inventory (including regular prescription drugs, narcotics, and other CDSA drugs)?

What do you do with drugs returned to the pharmacy from patients (if applicable)? Discuss with your supervisor how returned or expired narcotics and controlled substances at your practice site are monitored, accounted for, and eventually destroyed.

**Hospital Pharmacy Site:** Discuss how narcotics are transferred between areas within the hospital and the documentation requirements.

# 4.2 Contribute to the management of pharmacy inventory to ensure safe, effective, and efficient product distribution

- **4.2.5** Reconcile inventory for controlled substances, or any other substances selected.
- **4.2.6** Investigate inventory discrepancies and communicate findings to the pharmacist and/or other appropriate authority.

### Activity

Perform inventory count for narcotics, controlled drugs, and targeted substances.

Discuss with your supervisor the legislation and steps on how narcotic discrepancies should be identified, investigated, and reported to the pharmacist.

Review and discuss with your supervisor the CPhM Narcotic and Controlled Drug Accountability Guidelines.

- How are the manual adjustments to the computer or perpetual manual inventory monitored and reviewed?
- What is the documentation and reporting requirements for any narcotic discrepancies discovered?
- Who needs to be notified of discrepancies?

E-mail: registration@cphm.ca | Website: www.cphm.ca

### 4.3 Contribute to the management of record keeping activities within the practice setting

- **4.3.1** Use appropriate information technology to organize, maintain and retrieve pharmacy records.
- **4.3.2** Use information technology and record-keeping procedures that maintain the integrity, security, and permanence of pharmacy records.

### **Activity**

For accountability purposes, it is important that the various aspects of the drug distribution process are well documented. It must be clear who has taken the responsibility for each aspect of the drug distribution process including:

- Receiving a prescription
- Entering the prescription into the pharmacy computer system
- Preparing the prescription (including all steps involved in compliance or unit dose packaging)
- Assessing the prescription for therapeutic appropriateness
- Verification of the technical accuracy of the completed prescription
- · Patient counselling, and
- Any follow up or monitoring activities.

Note how documentation at your practice site is auditable and traceable for the various aspects of drug distribution. Could any changes be made to improve the process?

Discuss how a pharmacy documents access to DPIN when outside the regular processing of a prescription. For example, prescriber requests DPIN check.

### **Competence 5: Health Promotion**

Pharmacy technicians support health promotion activities for patients, communities, and populations in collaboration with the pharmacist.

### **Key Competencies**

- i. Support patient-specific health promotion activities in collaboration with the pharmacist.
- ii. Support public health activities in collaboration with the pharmacist.
- iii. Contribute to the maintenance of a healthy environment for the public.

### Competence 6: Knowledge and Research Application

Pharmacy technicians' access, retrieve and apply relevant information to make evidence-informed decisions within their practice with the goal of ensuring safe and effective product distribution.

### **Key Competencies**

- i. Respond to questions that do not require pharmacist referral using appropriate strategies.
- ii. Apply relevant information to practice.

### 6.1 Respond to questions that do not require pharmacist referral using appropriate strategies

- **6.1.1** Clarify requests for information to identify questions that require pharmacist referral.
- **6.1.2** Use a variety of retrieval techniques to access reliable and appropriate information, including evidence-based information when possible.
- **6.1.3** Organize and provide information using strategies appropriate to the target audience.

### **Activity**

Develop and maintain a list of questions that are common in your practice site that the pharmacy technician can answer. Questions may be from patients, physicians, staff members, or other health care professionals. Provide detailed answers to these questions that other pharmacy technicians can use to educate themselves and others on the topic. Collect answers from a variety of reliable and evidence-based resources (when possible). Maintain a list of references you used in developing your responses.

When would you refer a question to the pharmacist?

### **Drug Interactions**

**Community Pharmacy Site:** DPIN identifies different levels of drug interactions (ME1, ME2, ME3). What do each of these levels mean and how do you respond?

**Hospital Pharmacy Site:** The hospital drug order entry/EPR produce interaction warnings. Do the warnings identify different levels of risk? If so, how do you respond to the warning of various levels?

E-mail: registration@cphm.ca | Website: www.cphm.ca

### **6.2** Apply relevant information to practice

- **6.2.1** Gather new information, including evidence-based information, when possible, that may be applicable to practice.
- **6.2.2** Evaluate the information and use current, relevant, and reliable information to improve practice.

### **Activity**

Review your Personal Learning Action Plan again. Take THREE topics from the Plan or another area of your practice as a pharmacy technician where you might need further learning or education.

Research these areas/topics to further improve your understanding and address your knowledge gaps. Report your learning to your preceptor.

Further enhance your knowledge by watching a pre-recorded (or attending a live) Professional Development (PD) program. A list of PD programs can be found on the College website. Previously recorded programs can be found at

https://cphm.ca/practice-education/learning-activities/ and upcoming programs can be found in the Friday Five bulletins. Keep track of your learning with the Professional Development Log in your Registrant Portal.

Evaluate the learning with your supervisor and discuss how this learning can be implemented into your practice.

### **Competence 7: Communication and Education**

Pharmacy technicians communicate effectively with patients, the pharmacy team, other health professionals and the public, providing education when required.

### **Key Competencies**

- Establish and maintain effective communication skills.
- ii. Use safe, effective, and consistent communication systems.

### 7.1 Establish and maintain effective communication skills

- 7.1.2 Demonstrate verbal and non-verbal communication skills, including listening skills.
- **7.1.3** Demonstrate appropriate interview techniques.
- **7.1.4** Select appropriate communication and education techniques for use with the patient and other health professionals.
- **7.1.5** Conduct interpersonal interactions in a professional manner.
- **7.1.6** Communicate with sensitivity, respect, and empathy.

### **Activity**

Discuss with your supervisor the importance of communication between members of the health care team.

Reflect on a time when the interaction between you and another health care professional was positive because you demonstrated strong listening and non-verbal communication skills. What effective communication skills were demonstrated? Now reflect on a situation where the interaction was not ideal between you and another health care professional because you're listening, and communication skills were not ideal. What issues need to be addressed under this circumstance and what improvement is needed? What were the outcomes of each situation? What did you do differently in each example?

Identify a situation where, during a patient interview, you asked appropriate questions pertaining to the patient's medical history and obtained relevant information that may have otherwise been missed. What skills did you demonstrate?

Describe the last time there was a conflict between co-workers, or between a health care provider and a patient. What happened and why? Would you do anything differently looking back on the situation?

Identify a situation where a patient was upset or frustrated with you (or another health professional). Were you able to show empathy to the patient while

### **Competence 8: Intra- and Inter-Professional Collaboration**

Pharmacy technicians work in collaboration with the pharmacy team and other health professionals to support the delivery of comprehensive services, make best use of resources and ensure continuity of care in order to achieve the patient's health goals.

#### **Key Competencies**

- i. Create and maintain collaborative professional relationships.
- ii. Contribute to the effectiveness of working relationships in collaborative teams.
- iii. Participate in the delivery of collaborative health services in collaboration with the pharmacist.
- iv. Accept referrals from and make referrals to the pharmacist.

### 8.1 Create and maintain collaborative professional relationships

- **8.1.1** Identify potential collaborators with whom to initiate ongoing professional relationships.
- **8.1.2** Collaborate with other parties in the relationship to define roles and responsibilities of each party.

#### **Activity**

List the types of healthcare professionals that you interact with during your rotation and describe the nature of these interactions. What are each professional's roles and responsibilities?

Discuss with your supervisor the importance of an interdisciplinary approach to health care. Do all patients require an interdisciplinary approach to their health care? Discuss some specific patients your supervisor has had in his/her career that have required an integrated approach to health care.

Review the chart on the CPhM website outlining prescribing authorities for various healthcare professionals in Manitoba. Which healthcare professionals in Manitoba have prescribing authority and what limitations or conditions exist on their prescribing? What types of drugs (within the scope of practice) can be prescribed by these healthcare professionals?

# 8.2 Contribute to the effectiveness of working relationships in collaborative teams 8.3 Participate in the delivery of collaborative health services in collaboration with the pharmacist

- **8.3.1** Collaborate with team members to ensure appropriate utilization of resources.
- **8.3.2** Collaborate with team members to determine and achieve team goals and objectives. **8.3.3** Facilitate continuity of care.

#### Activity

What is your responsibility as a pharmacy technician with respect to collaboration with members of the health care team at your practice site? During prescription processing and the final product release?

How will you verify that the pharmacist has completed the therapeutic and clinical assessment of the prescription prior to release of the final product?

What are the team goals and objectives at your practice site? Who sets

these goals? What do you do in your practice to ensure patients receive

the highest quality of care?

### 8.4 Accept referrals from and make referrals to the pharmacist

**8.4.1** Recognize situations that fall beyond the scope of practice of pharmacy technicians and refer these situations to the pharmacist.

**8.4.2** Accept responsibility for referrals from the pharmacist.

#### **Activity**

Discuss with your supervisor the role of the pharmacy technician and differentiate your scope from that of a pharmacist, versus the rest of the pharmacy team members or health care team. How would you explain the pharmacy technician's scope of practice to a patient?

Discuss with your supervisor THREE different situations where you needed to make referrals to pharmacists at your practice site, or to other health care professionals. Why was a referral to another health care professional necessary in each of these circumstances?

### **Competence 9: Quality and Safety**

Pharmacy technicians collaborate in developing, implementing, and evaluating policies, procedures and activities that promote quality and safety.

#### **Key Competencies**

- i. Contribute to a culture of patient safety.
- ii. Contribute to continuous quality improvement and risk management activities related to the drug distribution system.
- iii. Ensure the quality, safety, and integrity of products.
- iv. Create and maintain a working environment that promotes safety.

## 9.1/9.2 Contribute to a culture of patient safety and contribute to continuous quality improvement and risk management activities related to the drug distribution system

- **9.1.1** Apply principles of patient safety to improve practice.
- 9.1.2 Employ best practices when informing the patient of the occurrence of a medication incident.
- **9.1.3** Share information about problems, resolutions, system changes and lessons learned with the workplace team.
- **9.2.1** Apply principles of continuous quality improvement to practice.
- **9.2.2** Apply principles of risk management to practice by anticipating, recognizing, and managing situations that place the patient at risk.
- 9.2.3 Identify the occurrence of a medication incident or close call and respond effectively to mitigate harm and

prevent reoccurrence.

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7 Phone (204) 233-1411 | Fax: (204) 237-3468

E-mail: registration@cphm.ca | Website: www.cphm.ca

## 9.1/9.2 Contribute to a culture of patient safety and contribute to continuous quality improvement and risk management activities related to the drug distribution system

#### **Activity**

What principles of patient safety are in place in your practice site?

Read the Medication Incidents and Near Miss Events Practice Direction. Discuss with your supervisor how errors are handled at the practice site, both those that have reached the patient and those that are identified before reaching the patient. For hospital practice sites, discuss the process for error reporting within the site and the health region.

Describe TWO or THREE situations pertaining to medication errors or near misses that you encountered at your practice site. Document these occurrences (using the tools specific to your practice site). Discuss with your supervisor how the collected information is processed for the purpose of error prevention. How is the information shared at the workplace? Who needs to be notified if an error occurs? What policies or procedures are in place at your practice site for informing patients of a medication incident?

Discuss with your supervisor a time you informed a patient of a medication error. What was the patient's response? How did you maintain professionalism? What aspect of the encounter could be improved?

What are critical incidents and what is the role of the pharmacy technician for critical incident reporting?

What is continuous quality improvement and why is it important? Are there any situations that may place the patient at risk at your practice site? Discuss with your supervisor. How can this be prevented or improved?

Describe how the principles of failure modes and effects analysis (FMEA) can be applied in the pharmacy and/or hospital drug distribution system in order to prevent errors and improve safety.

Safety IQ is a patient safety initiative implemented by CPhM for community pharmacies. Familiarize yourself with the program by reviewing the Safety IQ Academy website and Safety IQ resources.

View the Safety IQ training video: <u>Introduction to Safety IQ for Community Pharmacy.</u> Discuss what is safety culture and how does it improve patient safety.

### 9.3 Ensure the quality, safety, and integrity of products

- **9.3.1** Maintain the cleanliness, functionality and integrity of compounding, packaging, dispensing and storage equipment.
- **9.3.2** Ensure that products are stored and transported under the conditions required to maintain product quality,

safety, and integrity, including cold chain management.

#### **Activity**

Participate in the regular cleaning and maintenance of various dispensary supplies and equipment. Reflect on TWO situations where the proper maintenance of equipment or the proper storage condition contributes to product and patient safety.

What quality assurance process is in place for the various types of packaging that you prepare at your practice site?

What does cold chain management mean? What do you do if a product that requires refrigeration or freezing has been left at room temperature for an undetermined time?

### **Appendix A**

### **Demonstration of Product Release Proficiency Daily Tracking Log**

Check prescriptions to ensure the correct: patient, drug, dosage form, route, dose, quantity, directions, prescriber, and container/packaging Ensure that prescriptions are filled and checked to be in compliance with regulations and policies regarding the dispensing of drugs.

Use a new Daily Tracking Log each day to record all items checked by the pharmacy technician-in-training (maximum of 50 per day). The pharmacy technician candidate is required to complete a total of 200 checks without making any errors in order to satisfy the SPT Program requirements. All checks are to be recorded on this log, along with all details of any errors missed by the pharmacy technician-in-training. The DPRP daily tracking log forms do **not** need to be submitted to the College, rather the applicant should retain it for their own records. The daily tracking log must be available for inspection on demand and may be requested by the College at any time.

Pharmacy technician-in-training (fill in unshaded area): Use a new line for each prescription checked and if applicable, record the error identified during your technical check.

Evaluator (fill in grey shaded area): Initial either "no error missed" or "error missed". If an error is missed, record the details, and discuss with SPT learner.

PLEASE NOTE: The practice site does not need to have a Pharmacy Technician Final Check Application approved by the College in order for the pharmacy technician-in-training to complete the DPRP since an evaluator is completing the final check. However, once listed, a pharmacy technician can only perform the final check within a pharmacy that has had a Pharmacy Technician Final Check application and process approved by the College.

### **Appendix B**

### **Additional Questions for Discussion**

The following questions are available for discussion between the supervisor and the pharmacy technician-in-training. You may find it valuable to consider the scenarios that are applicable to your practice site. You are not required to submit answers to these questions to the College, but may still find it useful, for your future practice and experience, to come up with solutions and answers to these scenarios.

### **Non-Situational Questions:**

#### Community and Hospital Settings

- Define the formulary system.
- What are the principles of continuous quality improvement? Describe the involvement of the pharmacy staff in the continuous quality improvement process.
- During your training, note situations that require special attention with respect to policies and legal requirements.
- What programs are currently in place to support patients who need medications that are currently not available in Canada?
- Review the resources on the ISMP Canada website.
  - Find the area of the website that reports newsworthy items related to pharmacy practice and select a recent situation to discuss with your preceptor.
  - o Review one safety bulletin and share your learning with your preceptor.
  - Look for upcoming events that may be of interest to you or someone at your training site.
     Review the course content and determine whether it may be suitable to attend.
  - Identify one area that shows potential problems with respect to error risk within the drug distribution system at your training site. How can this be improved?

#### Hospital-Specific Setting

- How can DPIN-ER be accessed? For what reasons?
- What barriers to effective communication with the patient and prescriber exist in the hospital? How can these barriers be overcome?
- Describe the different tasks that a pharmacy technician can undertake compared to a pharmacy assistant or a pharmacy student working in a hospital.
- Describe the policies, standards, and procedures of your hospital and the Department of Pharmacy regarding investigational drugs.

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7
Phone (204) 233-1411 | Fax: (204) 237-3468

E-mail: registration@cphm.ca | Website: www.cphm.ca

- Who are the members of the Pharmacy and Therapeutics Committee and what are their roles?
- What type of drug distribution system is employed in your hospital? List the advantages and disadvantages compared to other systems.
- Section 83 of the Regulations to *The Pharmaceutical Act* discusses patient safety. Review this section and describe how this can be compiled and documented in hospital practice.

### **Situational Questions:**

#### Community and Hospital Settings

Prepare or discuss the preparation of at least two suitably challenging non-sterile or sterile
compounded products at your practice site using appropriate handling and compounding
procedures (aim to select compounds with at least three active ingredients, if possible).
 Determine the requirements for personnel, including personal protective equipment (PPE), legal
labelling requirements, compounding guidelines, beyond use dating, and standardized
documentation to support quality improvement.

#### Hospital-Specific Setting

- You are working evenings at a hospital pharmacy in Winnipeg. At 10:00 PM, an order arrives in the pharmacy for amphotericin B intravenous infusion, which your sterile products department prepares on a regular basis. You are the only technician on duty with a recently hired pharmacist. Neither of you has any experience in preparing sterile admixtures. The nurse on the ward has never prepared amphotericin B before. What do you do?
- You are screening prescription orders in the hospital dispensary when you suddenly recognize one of the patient's names as a former employee of the pharmacy department who retired several years earlier. By the medications that were ordered, you deduce that your former coworker is being treated for some type of cancer. She was a very popular employee, and you know the other pharmacy staff on duty would love to see her. How would you handle this situation?

#### Community Pharmacy-Specific Setting

- A patient comes in with a prescription you suspect is a forgery. What do you do? Who should you inform and what information should you forward?
- You are a pharmacy technician working in a community pharmacy. A good friend of yours, Amy, comes to the pharmacy to refill her prescription. As you briefly ask how she's doing, Amy mentions that her 16-year-old daughter, Allison, has been distant lately, and Amy is worried about her. Meaning well, you ask if there's anything you can do to help, and Amy says, "You know what, there is. Allison has a new boyfriend and I'm wondering if she's taking some birth control that's making her more distant lately. Has she recently filled any prescriptions?" You know that Allison indeed did come by last week to pick up a prescription for birth control. What do you do?

200 Tache Avenue, Winnipeg, Manitoba R2H 1A7
Phone (204) 233-1411 | Fax: (204) 237-3468
E-mail: registration@cphm.ca | Website: www.cphm.ca

- A patient, Vlad, comes into the pharmacy with a methadone prescription. What special
  considerations should you take into account when dispensing this methadone prescription? How
  does this differ from dispensing a buprenorphine-naloxone prescription? Where would you find
  this information?
- The following week, Vlad comes into your pharmacy for his methadone dose. When you let the pharmacist know that he's here, the pharmacist tells you, "You've become quite experienced and well-trained in these types of cases, and you've seen me witness methadone dosing all the time. Why don't you go ahead and witness the ingestion this time? I'll even watch from where I am right now and come over if anything happens!" What do you do?
- Jasbir enters your pharmacy with a prescription for her son, Sundeep. As you review the prescription, you notice the prescriber and prescription is from British Columbia. How do you manage this out-of-province prescription? What if the prescription had come from Minnesota? Where can you find information to support your decision?
- Dr. Li from Health Medical Clinic calls the pharmacy, and you pick up the phone. They'd like to put in a verbal prescription. Can you take this verbal order? What are the policies and procedures involved? If Dr. Li's assistant had called with a verbal order on their behalf, would you be able to accept this verbal prescription?
